De Stijl Generator

The website functions as a tool to generate De Stijl paintings. And the result can be saved for multiple purposes, such as wall papers, wall decorations, etc. De Stijl has a lot of restraints to it: primary colors only, composed by only basic geometric shapes and line. Therefore, the users' control of the result is limited. The patterns are given to the user, and the dimensions are fixed. The user hovers on the painting to control the pattern of each smaller area in order to come up with an exclusive composition of De Stijl painting.
